Hitchhikers Guide to Neurosteroids

Going from "that nigga" to "that bitch-ass nigga" and back again

Retard et al.

Accidental manipulation of psychology via sex steroid neurochemistry.

INTRODUCTION

This paper explores the effects of various sex steroids on the human psyche and physiology, with a particular focus on the unintended consequences of manipulating neurochemistry. The study documents the subjective experiences of a subject undergoing different hormonal regimens, providing a qualitative analysis of the resulting changes in personality, cognition, and physical performance.

TL;DR: DHEA-E is the weed of steroids

INDUCING A COMPLETE FUCKING PERSONALITY CHANGE W/ DHEAE

Table 1 | Comparative effects of sex steroid neurochemistry on subject.

Effect / Compound	DHTP	DHTE	DHEAE
Physical Recomp	++	NC	NC
Mental Energy	− −	NC	+
Zen (Calmness)	++	+	− −
Strength Boost (1-3 Rep Range)	++	NC	−
Strength Boost (2-4 Rep Range)	+	+	NC
Strength/Endurance (Higher Reps)	−	NC	++
Decisiveness	+	++	− −
Coding Ability	NC	NC	NC
Verbal Fluency	− −	NC	++
Believing in Nonsense (EQ, etc.)	NC	NC	++

SUBJECTIVE EFFECTS

DISCUSSION

What its like first discovering longer esters w/ tissue specific distribution patterns:

Fig. 5 | Discovery of longer esters. Initial observations of ester distribution patterns.

Experimental Objective

The author's original intent in administering DHEAE to the subject was to proactively prevent adrenal fatigue (despite no symptoms), improve joint lubrication (minor issues but confounded with significant increases in subject lifts), as well as potentially backfilling any neurosteroids that would be (theoretically) slightly depressed from prior experiments that lacked a pregnenalone base. Given DHEAE helps offset adrenal fatigue, esp if induced from DHT, combined with its known slight estrogenic metabolites, the author believed this would be a useful adjuvant therapy alongside other experiements. The subject disagreed and retroactively revoked consent. The experimenter and author decided to proceed nonetheless. As we shall see below, the subject was proven correct.

Animal Study Meta Logs

Downside when stacking with estrogenic effect of DHEA => T => E2 conversion + backdoor shunt pathways => u are now in a high E2 high cort state despite ur entire lifelong biochemistry being built for high af androgens ==> FFFFFUUUUUUUCCCCCKKKKKK DIS SUCKS. You will get energy, you will be giddy, you will be a clinical grade S tier BIATCH. DO NOT RECOMMEND. Especially if you've never felt stress/rumination before. Don't. Its fucking useless.

Also, your fucking music tastes change. Fucking dramatically. You go from liking Rachmaninoff, linkin park, and hardstyle zyzz remixes to thinking Nickleback is the sound of a fucking generation. It’s midwit af. It’s basically lowering the standard deviation of the distribution, forcing you into the middle, then having Chinese water torture slowly drive you insane except instead of u going insane it makes everyone around u insane and ur just riding the waves of FMLing euphoria like some crackaddled heroin junkie.

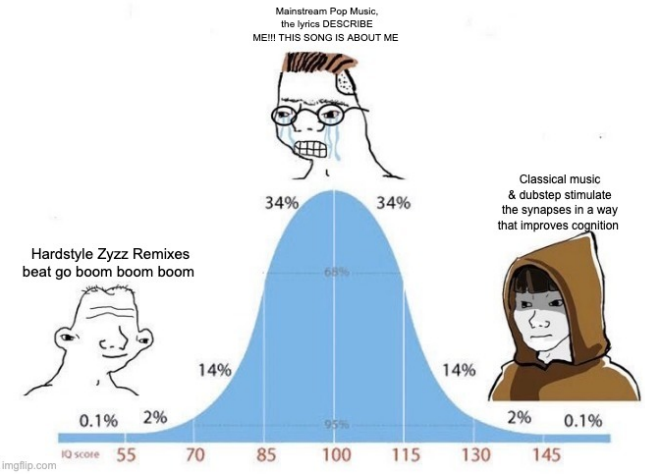

Fig. 6 | Music taste change. Observed shifts in auditory preferences.

The muscle volumization, joints & general workouts; holy fuck is it goated. Suspect the DHEA gets rapidly metabolized into T locally intramuscular bc holy fuck, and the joints. like someone replaced ur synovial fluid with wd40. Perfect joint lubrication. U can crank out reps for days. Skin splitting pumps.

Also, as E2 / estrogenic effects of DHEAE build, u start to “feel” like things “should” be a certain way. Not “are” a certain way (DHT). Not “can be made” a certain way (T). “Should” be a certain way (E). This is no way to build a

productive fucking society. This is the way of the emotionally volatile sheeple sleepwalking through life.

I don't count sheep to fall asleep
I count chemtrails to STAY AWAKE!!
STAY WITH THE FLOCK!
STAY WITH THE FLOCK!
SHEEPLE...
SHEEPLE EVERYWHERE!

Fig. 7 | Emotional volatility. Psychological shifts and "sheeple" behavior under E2 influence.

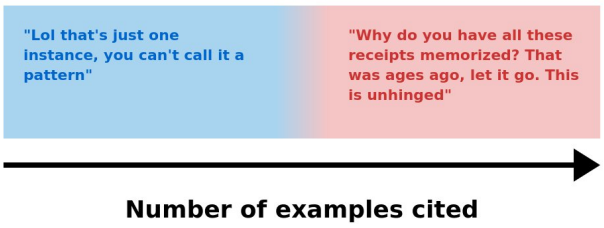
Youthfulness, holy shit ur mental state is teleported to the last time u had DHEA levels that high, was basically being 17 again, in both good and bad ways (mostly bad). Weirdly didn't have nearly as much residual anger but the volatility was there in fucking spades

Colors. Fucking colors. This I will in fact miss. Colors were literally brighter. It's tough to describe. Imagine seeing ur entire life in sepia, suddenly the introduction of proper trichromatic colors is massive. Its that lv of change and this particular drug fueled moron has solid color perception.

Also words CEASE TO LOSE THEIR FUCKING MEANING. AND HOLY SHIT IS IT ANNOYING. INSTEAD OF SAYING "YOURE FUCKING STUPID" or ignoring, You say shit like "You should really think about what you're saying" as if that's gonna change a fucking microcephalic adlepate who wouldn't learn shit even if you gave them till the fucking heat death of the motherfucking multiverse

Also, UR TOLERANCE FOR BULLSHIT GOES STRATOSPHERIC. Someone wants to tell u about their fucking life problems? Sure why not. Instead of telling them to go tell someone who fucking gives a fuck about their lack of accomplishment or ability to be a productive member of society or their adult daycare job as project manager for BrainRot Inc., you actually fucking communicate with them. AND DONT FUCKING HATE IT?!?!?!?! What fucking aids is this. Just give me the organic, all American Charlie sheen tiger blood derived aids instead of this postdoctoral jeet from UC Berkeley who started a YC company moved to Williamburg form of aids. Fuck that shit.

Racism, it also makes you so much less racist: ur pattern recognition goes to fucking shit. You start seeing everyone as their own unique fucking snowflakes despite obvious fucking patterns. Ur ability to notice goes to shit. Fucking retarded shit. Makes you wanna move to Minnesota and open up a non profit commune for underprivileged parapalegic Somalis (physically parapalegic, most are mentally quadrapalegic and one of the many reasons why there should be an IQ test for immigration). IT MAKES YOU THINK CANADIANS ARE PEOPLE TOO.



"Lol that's just one instance, you can't call it a pattern"
"Why do you have all these receipts memorized? That was ages ago, let it go. This is unhinged"
Number of examples cited

Fig. 6.9 | Pattern recognition impairment. Evidence-based argumentation: either anecdote or too much data.

> *"Look if you had one shot, one opportunity"*
> *"To lose every brain cell you ever had"*
> *"You capture it, or just let it slip"*

Going from high DHT => high E is going from ultra instinct sage mode saitama to a cross between the worst properties of yamcha and jar jar fucking binks. Never again.

SALVAGE TREATMENT

Upon administration of 2.5mg DHTP & 2.5mg DHTE, the subjects mental state appears to have returned to baseline, having minimal loss in overall higher cognitive functions, effectively canceling out the effects of the residual DHEAE ester that had built up in the subjects system. The experimenter intends to taper down the DHTE in line with drop in DHEA levels in vivo as the ester is cleared.

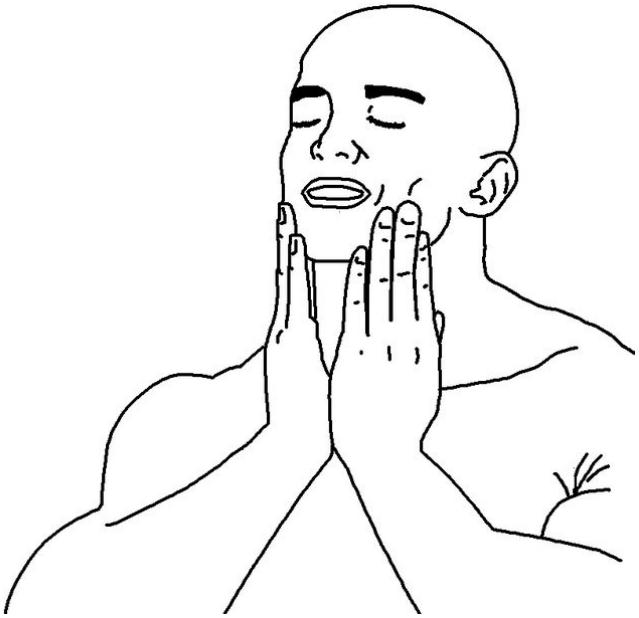


Fig. 8 | Salvage treatment. Recovery phase observations.

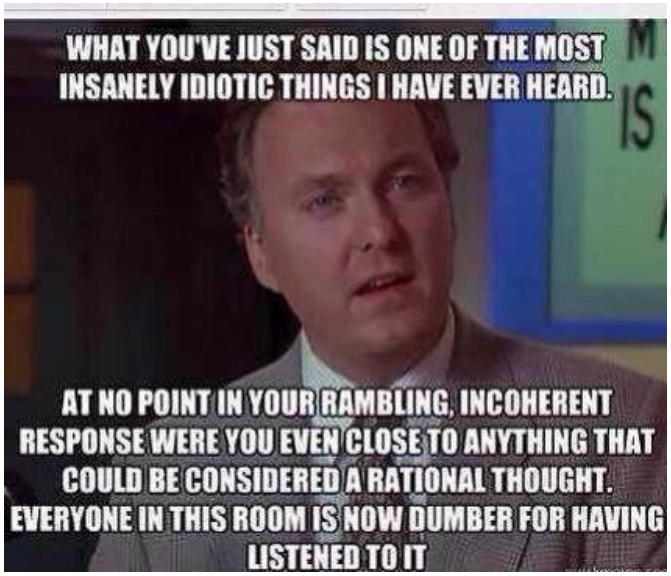

WHAT YOU'VE JUST SAID IS ONE OF THE MOST INSANELY IDIOTIC THINGS I HAVE EVER HEARD.
AT NO POINT IN YOUR RAMBLING, INCOHERENT RESPONSE WERE YOU EVEN CLOSE TO ANYTHING THAT COULD BE CONSIDERED A RATIONAL THOUGHT. EVERYONE IN THIS ROOM IS NOW DUMBER FOR HAVING LISTENED TO IT

CONCLUSION

Now is the author saying YOU shouldn't do ultra high dose DHEA? Absolutely not. The author is suggesting that if you do it, inform the author so the he may record the crash out in 4k panoramic from multiple angles. You know, "for research purposes"

Am I crazy? Yes. doesn't change the fact that I'm right.

GLOSSARY

DHEA-E: Dehydroepiandrosterone Enanthate

DHTP: Dihydrotestosterone Propionate

DHTE: Dihydrotestosterone Enanthate

REVIEWER COMMENTS (THE FUCKING PEANUT GALLERY)

"JAMA is gonna love this" - Canadian Oligarch, MedTech Founder

(JAMA stands for just another moron association)

Frens of both the subject and the author have suggested, "just do the opposite", to wit, DAFUQ DO U THINK THIS ARTICLE IS.

"I think the chemical effects of art hoes may be stronger" - every male, also Bryan Johnson

"Doesnt make me want to read it"
